Sprint 2 Report

Project: Pupper
Team Members: Aaron Le, Chris Yeh, Joseph Castelan, Josh Long, Sri Boinapalli
Date: 11/05/2017

Actions to stop doing:

We feel that, as a team, we communicate well with one another and can get things done on time. However, we still have the same problem of time--management, where we do not realize where the time goes and many tasks get pushed to be completed toward the end of the Sprint.

Actions to start doing:

Our team needs to start on tasks earlier in the Sprint. Many tasks have gotten pushed to to the side during this Sprint due to factors outside of this project. If we stay focused and keep a steady pace, all user stories will be able to be finished in future Sprints.

Actions to keep doing:

Everyone is on time to Scrum meetings and accurately presents their progress during the meetings. If this continues through the next Sprint, our team will be on track to finish most of what we set to do.

Work completed:

- Set up server communication
- Set up table in database for Adoption Centers
- Write queries for database communication

Work not completed:

- Design upload page
- Implement Google Maps
- Ability to upload dog info

Work completion rate:

We had four user stories to complete for this Sprint -- an uploading feature to allow Dog owners to communicate with one another, a way for adoption centers to use the app, a way for users to see how far apart they may be or an adoption center may be, and a way to better store information within our database. In this Sprint, we were able to complete a database feature for the adoption centers and worked on writing queries for the database. We also were able to finish the profiles for dogs within the app as well as giving users a profile picture. We were unable to get to the other tasks due to not

starting early enough during this Sprint. We have, like the first Sprint, spent about 10 hours instead of the predicted 12.
