Sprint 3 Report

Project: Pupper
Team Members: Aaron Le, Chris Yeh, Joseph Castelan, Josh Long, Sri Boinapalli
Date: 11/19/2017

Actions to stop doing:

We should stop starting our tasks so late. Most of the tasks of this sprint had to be pushed to the second half of the sprint because we had to study for the test. Now that midterm season has ended, we should have more time to allocate for the sprint.

Actions to start doing:

We should start writing more detailed comments. The current code does not have many comments explaining what is happening. Since most of us are working on the same files, it might be useful for us to have good comments so that it's easier for us to figure out how to merge our work.

Actions to keep doing:

We should keep working as hard as we have been in the last week. If we are able to keep that pace steady throughout the sprint, we could get a lot of work done.

Work completed:

- UI was improved
- Implemented the ability to download/upload images (including an upload page)
- Implemented a picture-viewing interface
- Basic dog profile page was created

Work not completed:

- sending/receiving lost dog notifications
- Implement Google Maps

Work completion rate:

Not much work was completed during the first half of the sprint (because of the test), but we managed to complete most of our goals in the last half. We estimated that we would need around 13 hours to complete all the tasks. We have spent roughly 11 hours and were able to compete most of the tasks. The biggest obstacle this sprint was that we had a test halfway through the sprint. That shouldn't be a problem for us anytime soon.
